

Codebook "sakila-original_ground_truth_full.json"

Variable Name: actor_actor_id

Variable Description: A surrogate primary key used to uniquely identify each actor in the table.

Data Type: SMALLINT

###

Variable Name: actor_first_name

Variable Description: The actor\

Data Type: VARCHAR(45)

###

Variable Name: actor_last_name

Variable Description: The actor\

Data Type: VARCHAR(45)

###

Variable Name: actor_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: address_address

Variable Description: The first line of an address.

Data Type: VARCHAR(50)

###

Variable Name: address_address2

Variable Description: An optional second line of an address.

Data Type: VARCHAR(50)

###

Variable Name: address_address_id

Variable Description: A surrogate primary key used to uniquely identify each address in the table.

Data Type: SMALLINT

###

Variable Name: address_city_id

Variable Description: A foreign key pointing to the city table.

Data Type: SMALLINT

###

Variable Name: address_district

Variable Description: The region of an address, this may be a state, province, prefecture, etc.

Data Type: VARCHAR(20)

###

Variable Name: address_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: address_location

Variable Description: A Geometry column with a spatial index on it.

Data Type: GEOMETRY

###

Variable Name: address_phone

Variable Description: The telephone number for the address.

Data Type: VARCHAR(20)

###

Variable Name: address_postal_code

Variable Description: The postal code or ZIP code of the address (where applicable).

Data Type: VARCHAR(10)

###

Variable Name: category_category_id

Variable Description: A surrogate primary key used to uniquely identify each category in the table.

Data Type: TINYINT

###

Variable Name: category_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: category_name

Variable Description: The name of the category. such as ["Action", "Animation", "Children", "Classics", "Comedy", "Documentary", "Drama", "Family", "Foreign", "Games", "Horror", "Music", "New", "Sci-Fi", "Sports", "Travel"]

Data Type: VARCHAR(25)

###

Variable Name: city_city

Variable Description: The name of the city.

Data Type: VARCHAR(50)

###

Variable Name: city_city_id

Variable Description: A surrogate primary key used to uniquely identify each city in the table.

Data Type: SMALLINT

###

Variable Name: city_country_id

Variable Description: A foreign key identifying the country that the city belongs to.

Data Type: SMALLINT

###

Variable Name: city_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: country_country

Variable Description: The name of the country.

Data Type: VARCHAR(50)

###

Variable Name: country_country_id

Variable Description: A surrogate primary key used to uniquely identify each country in the table.

Data Type: SMALLINT

###

Variable Name: country_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: customer_active

Variable Description: Indicates whether the customer is an active customer. Setting this to FALSE serves as an alternative to deleting a customer outright. Most queries should have a

WHERE active = TRUE clause.

Data Type: BOOLEAN

####

Variable Name: customer_address_id

Variable Description: A foreign key identifying the customer address in the address table.

Data Type: SMALLINT

####

Variable Name: customer_create_date

Variable Description: The date the customer was added to the system. This date is automatically set using a trigger during an INSERT.

Data Type: DATETIME

####

Variable Name: customer_customer_id

Variable Description: A surrogate primary key used to uniquely identify each customer in the table.

Data Type: SMALLINT

####

Variable Name: customer_email

Variable Description: The customer email address.

Data Type: VARCHAR(50)

####

Variable Name: customer_first_name

Variable Description: The customer first name.

Data Type: VARCHAR(45)

####

Variable Name: customer_last_name

Variable Description: The customer last name.

Data Type: VARCHAR(45)

####

Variable Name: customer_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

####

Variable Name: customer_store_id

Variable Description: A foreign key identifying the customer "home store." Customers are not limited to renting only from this store, but this is the store at which they generally shop.

Data Type: TINYINT

####

Variable Name: film_description

Variable Description: A short description or plot summary of the film.

Data Type: TEXT

####

Variable Name: film_film_id

Variable Description: A surrogate primary key used to uniquely identify each film in the table.

Data Type: SMALLINT

####

Variable Name: film_language_id

Variable Description: A foreign key pointing at the language table. identifies the language of the film.

Data Type: TINYINT

####

Variable Name: film_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

####

Variable Name: film_length

Variable Description: The duration of the film, in minutes.

Data Type: SMALLINT

####

Variable Name: film_original_language_id

Variable Description: A foreign key pointing at the language table. identifies the original language of the film. Used when a film has been dubbed into a new language.

Data Type: TINYINT

####

Variable Name: film_rating

Variable Description: The rating assigned to the film. Can be one of: G, PG, PG-13, R, or NC-17.

Data Type: ENUM('G','PG','PG-13','R','NC-17')

####

Variable Name: film_release_year

Variable Description: The year in which the movie was released.

Data Type: YEAR

####

Variable Name: film_rental_duration

Variable Description: The length of the rental period, in days.

Data Type: TINYINT

####

Variable Name: film_rental_rate

Variable Description: The cost to rent the film for the period specified in the rental_duration column.

Data Type: DECIMAL(4,2)

####

Variable Name: film_replacement_cost

Variable Description: The amount charged to the customer if the film is not returned or is returned in a damaged state.

Data Type: DECIMAL(5,2)

####

Variable Name: film_special_features

Variable Description: Lists which common special features are included on the DVD. Can be zero or more of: Trailers, Commentaries, Deleted Scenes, Behind the Scenes.

Data Type:

SET('TRAILERS','COMMENTARIES','DELETEDSCENES','BEHINDTHESCENES')

####

Variable Name: film_title

Variable Description: The title of the film.

Data Type: VARCHAR(128)

####

Variable Name: film_actor_actor_id

Variable Description: A foreign key identifying the actor.

Data Type: SMALLINT

####

Variable Name: film_actor_film_id

Variable Description: A foreign key identifying the film.

Data Type: SMALLINT

###

Variable Name: film_actor_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: film_category_category_id

Variable Description: A foreign key identifying the category.

Data Type: TINYINT

###

Variable Name: film_category_film_id

Variable Description: A foreign key identifying the film.

Data Type: SMALLINT

###

Variable Name: film_category_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: film_text_description

Variable Description: A short description or plot summary of the film.

Data Type: TEXT

###

Variable Name: film_text_film_id

Variable Description: A surrogate primary key used to uniquely identify each film in the table.

Data Type: SMALLINT

###

Variable Name: film_text_title

Variable Description: The title of the film.

Data Type: VARCHAR(255)

###

Variable Name: inventory_film_id

Variable Description: A foreign key pointing to the film this item represents.

Data Type: SMALLINT

###

Variable Name: inventory_inventory_id

Variable Description: A surrogate primary key used to uniquely identify each item in inventory.

Data Type: MEDIUMINT

###

Variable Name: inventory_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: inventory_store_id

Variable Description: A foreign key pointing to the store stocking this item.

Data Type: TINYINT

###

Variable Name: language_language_id

Variable Description: A surrogate primary key used to uniquely identify each language.

Data Type: TINYINT

###

Variable Name: language_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: language_name

Variable Description: The English name of the language.

Data Type: CHAR(20)

###

Variable Name: payment_amount

Variable Description: The amount of the payment.

Data Type: DECIMAL(5,2)

###

Variable Name: payment_customer_id

Variable Description: The customer whose balance the payment is being applied to. This is a foreign key reference to the customer table.

Data Type: SMALLINT

###

Variable Name: payment_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: payment_payment_date

Variable Description: The date the payment was processed.

Data Type: DATETIME

###

Variable Name: payment_payment_id

Variable Description: A surrogate primary key used to uniquely identify each payment.

Data Type: SMALLINT

###

Variable Name: payment_rental_id

Variable Description: The rental that the payment is being applied to. This is optional because some payments are for outstanding fees and may not be directly related to a rental.

Data Type: INT

###

Variable Name: payment_staff_id

Variable Description: The staff member who processed the payment. This is a foreign key reference to the staff table.

Data Type: TINYINT

###

Variable Name: rental_customer_id

Variable Description: The customer renting the item. This is a foreign key reference to the customer table.

Data Type: SMALLINT

###

Variable Name: rental_inventory_id

Variable Description: The item being rented. This is a foreign key reference to the inventory table.

Data Type: MEDIUMINT

###

Variable Name: rental_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: rental_rental_date

Variable Description: The date and time that the item was rented.

Data Type: DATETIME

####

Variable Name: rental_rental_id

Variable Description: A surrogate primary key that uniquely identifies the rental.

Data Type: INT

####

Variable Name: rental_return_date

Variable Description: The date and time the item was returned.

Data Type: DATETIME

####

Variable Name: rental_staff_id

Variable Description: The staff member who processed the rental. This is a foreign key reference to the staff table.

Data Type: TINYINT

####

Variable Name: staff_active

Variable Description: Whether this is an active employee. If employees leave, their rows are not deleted from this table. instead, this column is set to FALSE.

Data Type: BOOLEAN

####

Variable Name: staff_address_id

Variable Description: A foreign key to the staff member address in the address table.

Data Type: SMALLINT

####

Variable Name: staff_email

Variable Description: The staff member email address.

Data Type: VARCHAR(50)

####

Variable Name: staff_first_name

Variable Description: The first name of the staff member.

Data Type: VARCHAR(45)

####

Variable Name: staff_last_name

Variable Description: The last name of the staff member.

Data Type: VARCHAR(45)

####

Variable Name: staff_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

####

Variable Name: staff_password

Variable Description: The password used by the staff member to access the rental system. The password should be stored as a hash using the SHA2() function.

Data Type: VARCHAR(40)

####

Variable Name: staff_picture

Variable Description: A BLOB containing a photograph of the employee.

Data Type: BLOB

####

Variable Name: staff_staff_id

Variable Description: A surrogate primary key that uniquely identifies the staff member.

Data Type: TINYINT

###

Variable Name: staff_store_id

Variable Description: The staff member "home store." The employee can work at other stores but is generally assigned to the store listed.

Data Type: TINYINT

###

Variable Name: staff_username

Variable Description: The user name used by the staff member to access the rental system.

Data Type: VARCHAR(16)

###

Variable Name: store_address_id

Variable Description: A foreign key identifying the address of this store.

Data Type: SMALLINT

###

Variable Name: store_last_update

Variable Description: When the row was created or most recently updated.

Data Type: TIMESTAMP

###

Variable Name: store_manager_staff_id

Variable Description: A foreign key identifying the manager of this store.

Data Type: TINYINT

###

Variable Name: store_store_id

Variable Description: A surrogate primary key that uniquely identifies the store.

Data Type: TINYINT

###
